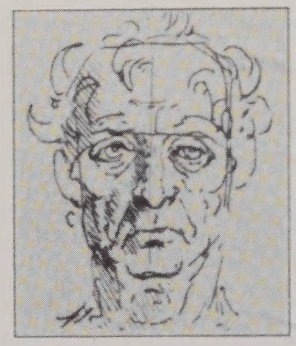
LEONARDO DA VINCI

Corpus of the Anatomical Studies in the Collection of Her Majesty the Queen at Windsor Castle



Four years ago, Johnson Reprint Corporation embarked on a publishing project so ambitious and challenging that it was hailed as "probably the most prestigious publishing coup of all time." The subject: The Anatomical Studies of Leonardo da Vinci in the Royal Library at Windsor Castle. The problem: To produce a facsimile edition deserving of the genius of Leonardo.

Today, Johnson Reprint Corporation is proud to announce that the challenge has been met. The Anatomical Studies, newly restored and impeccably reproduced in a facsimile of consummate beauty and intelligence, are now available in a limited edition of 998 hand-numbered sets.

These anatomical studies, executed over the course of Leonardo's lifetime from clandestine dissections, combine the perceptions of a Renaissance scientist with the technique of an artist of genius. From a fetus *in utero* to the skeletal structure of the foot, they present a wealth of peerlessly observed anatomical detail.

The 201 facsimile plates are presented in portfolio. Two text volumes contain transliterations of the artist's notes, translations of those notes into English, and a detailed medical index; they also include extensive commentaries by the editors, Professor Carlo Pedretti and Dr. Kenneth Keele.

Publication date: October 1, 1979

The price for the set is $6600.
